RohithChaduvala

Hyderabad, India

Career Objective

Motivated Data Engineer with hands-on experience in building Azure-based ETL pipelines, orchestrating workflows, and delivering real-time analytics solutions. Skilled in SQL, PySpark, Databricks, ADF, and Power BI. Passionate about scalable data architectures (Bronze–Silver–Gold) that turn raw data into actionable insights.

Education

B.Tech, Computer Science – Anurag University *2022–Present*
CGPA: 8.40 / 10

Intermediate – Kakatiya Junior College *2020–2022*
Score: 962 / 1000

SSC – Krishnaveni Talent School *2020*
GPA: 10 / 10

Technical Skills

Programming & Analytics: Python, Java, JavaScript, SQL, Prompt Engineering, Basics of Machine Learning
Web Technologies: ReactJS, NodeJS, ExpressJS, HTML5, CSS3, RESTful APIs
Data Engineering: Azure Data Factory, Databricks, Synapse Analytics, Snowflake, Fabric, Data Lake, ETL/ELT Pipelines
Databases: MySQL, MongoDB, SQL Pool
Tools & Platforms: Azure, Docker, Git, Power BI, Tableau, Microsoft AutoGen
Other Skills: SDLC pracitces, Data Modeling, Dashboarding, Cloud Integration, Real-time Streaming

Projects

End-to-End Azure Data Engineering Pipeline (AdventureWorksLT)
Tools Used: SQL Server, Azure Data Factory, Data Lake, Databricks, Synapse, Power BI

- Designed a complete on-prem to cloud ETL pipeline using **ADF** and **Data Lake** (Bronze–Silver–Gold layers).
- Applied data cleaning and transformation in **Databricks (PySpark)**; automated loading into **Synapse**.
- Developed an interactive **Power BI Sales Dashboard** visualizing KPIs by region, category, and date.

Weather Data Pipeline – Real-Time Streaming
Tools Used: Databricks, Azure Functions, Event Hubs, Fabric, Power BI

- Built a real-time pipeline to ingest and process weather & air-quality data from WeatherAPI via **Azure Functions**.
- Performed schema validation, deduplication, and transformations in **Databricks (PySpark)**.
- Streamed processed data to **Azure Event Hubs** and ingested into **Fabric KQL DB** for low-latency analytics.
- Created a live **Power BI Dashboard** (temperature, AQI, alerts) achieving <5s latency; configured Fabric Alerts for threshold notifications.

AutoGen DSA Code Generator – GenAI Multi-Agent System
Tools Used: Python, AutoGen, LangChain, Streamlit

- Developed a **GenAI multi-agent system** to automatically solve and validate DSA problems.
- Designed agents: Problem Solver (code generation) and Executor (Docker-based validation) with retry logic.
- Implemented collaborative agent framework using Round-Robin chat; achieved 90% error reduction across test cases.

Certifications & Achievements

- **Udemy:** Data Scientist & Engineering (May 2025)
- **Databricks:** Lakehouse Fundamentals (Apr 2025)
- **Microsoft:** AZ-900 Certified (Sep 2024)
- **Accenture:** Data Analytics Simulation (Apr 2025)
- NSP Scholar – National scholarship for academic excellence
- NSS Volunteer – Led community-driven tech literacy programs
